Profile Summary

Full-stack and platform engineer with 4+ years building SaaS products and the infrastructure they run on. Leading the architecture of a multi-tenant newsletter platform for 20K+ subscribers at Plutonapps, and built Meshploy, an open-source self-hosted platform where any server joins one private WireGuard mesh.

Experience

Plutonapps (WhiteRose Lab Pvt. Ltd.) Kolkata, India
Full-stack Developer Apr 2024 – Present

- Leading the architecture of a multi-tenant newsletter platform for 20K+ subscribers, mentoring 2 developers: publisher sites on their own domains, paid plans through each publisher's Stripe Express account, automations and segments, and a Model Context Protocol (MCP) server that lets an AI assistant run it with sensitive data walled off.
- Tuning the multi-model classification harness (OpenRouter: Jev, Haiku, Nemotron and others) of an AI inbox that reads email and sorts it automatically.
- Automated self-hosted GitHub Actions runners with an autoscaler that streams each job over a TLS relay to a fresh Docker-in-Docker runner, saving about 3.5K CI minutes a month.
- Cut analytics query time from 8s to 2s by bringing in ClickHouse behind real-time dashboards across several codebases.
- Improved event-processing reliability by 40% with dead-letter queues and automated retries in RabbitMQ.
- Set up OpenTelemetry/SigNoz tracing and standardized CI/CD pipelines, halving bugs and code review time.
- Developed a Restate workflow builder whose long-running sequences survive network and server failures, and shared component and schema packages across services.

DevOps Consultant (Freelance) Dec 2023 – Apr 2024

- Cut a client site's load time by 85% (GTmetrix grade D to A), containerized 10+ projects each with a CI/CD pipeline, and brought in open-source IDP tooling that took deployment and troubleshooting from 4–5 days to 2.

Co-founder, Desk Accessories Brand Oct 2022 – Nov 2023

Reworked open-source keyboard designs (Bakeneko60, Bakeneko65, crkbd) into our own 3D models in Fusion 360, and took the range, from keyboards to wrist rests and dust covers, through vendor sampling into production.

TCM Stunner IT Consultants LLP Kolkata, India
Full-stack Software Engineer Feb 2022 – Oct 2022

- Implemented DSky, a WebRTC push-to-talk platform with group audio broadcasting and recorded P2P video calls on Socket.io, a Mediasoup SFU and FFmpeg, carrying 20+ users on one channel.

Projects

Meshploy github.com/meshploy/meshploy | meshploy.com
Open-source Internal Developer Platform (IDP): Go, React, PostgreSQL, K3s Mar 2026 – Present

- Built end to end and run it on my own production gateway, directing AI coding agents (Claude Code) while owning architecture, review and validation on real hardware.
- Architected the mesh so any server on any provider or in a home lab joins over WireGuard (Headscale) with one outbound connection; workers expose no public ports, only the gateway faces the internet.
- Generated the edge configuration (Caddy, CoreDNS, Headscale) from a versioned snapshot with golden-file tests, so several domains, per-domain DNS modes and a movable primary need no hand-edited config.
- Designed environment levels that promote the same built image from staging to production, with per-level databases cloned from backups and guards against reading from a lower level.
- Developed a Go REST API (Chi + Huma, OpenAPI 3.1) and a React 19 console with live build logs and a terminal into any node or pod, covered by Playwright end-to-end tests; scoped agent identities and a 100-tool MCP server.
- Shipped a migration path from Dokploy that moves apps, databases, domains and certificates with a rollback journal; rehearsed over seven passes on real servers, fixing about 30 defects.

Technical Skills

Languages: TypeScript, JavaScript, SQL, Go (Golang), Python
Frontend: React, Next.js, TanStack Router, TanStack Query, Tailwind CSS
Backend: Node.js, Bun, Hono, GraphQL, REST, Restate, RabbitMQ, WebRTC
Data: PostgreSQL, ClickHouse, MongoDB, Redis, Drizzle **Cloud:** AWS, ECS, ALB/NLB, DigitalOcean
Infra: Kubernetes, k3s, Docker, WireGuard, Headscale, Caddy, CoreDNS, Nginx, Terraform, Linux, GitHub Actions
Observability: OpenTelemetry, SigNoz, Prometheus, Grafana, Loki
Testing & AI tooling: Playwright, Claude Code (AI-assisted development), MCP, OpenRouter

Education

Amity University (Distance Learning)
Bachelor of Finance & Investment Analysis, CGPA: 8.8 2019 – 2022
